

Wool Contaminated With Manure or Dung Locks

To determine the action to take on wool that is both lightly (less than 20%) or heavily (20% or more) contaminated with manure or dung locks and from a country or region affected with FMD, see [Table 3-7-16](#).

TABLE 3-7-16 Wool Contaminated with Manure or Dung Locks and from a Country or Region of Origin Affected with FMD

If the importation is:	And the country or region of export is:	And:	And is:	Then:
Wool ¹ that is lightly (less than 20%) contaminated with manure or dung locks	Affected with FMD	<p>◆ Is accompanied by a certificate² from the agency responsible for animal health in the exporting region</p> <p>OR</p> <p>◆ Is accompanied by a declaration from the exporter that verifies the wool is sheep body wool, farm or full skirted</p>		RELEASE
		Lacks the certification or declaration described in the cell above	Consigned to an approved establishment	AUTHORIZE shipment under seal with VS Form 16-78 (see Appendix K to complete form)
			Not consigned to an approved establishment	REFUSE ENTRY
Wool that is heavily (20% or more) contaminated with manure or dung locks	Affected with FMD		Consigned to an approved establishment	AUTHORIZE shipment under seal with VS Form 16-78 (see Appendix K to complete form)
			Not consigned to an approved establishment	REFUSE ENTRY

- 1 Wool **only** comes from ruminants alpaca, goats, and sheep.
- 2 A certificate bearing the seal of the proper department of the national government and signed by an official veterinary inspector, showing that the therein described wool was taken from animals slaughtered under national government inspection, in a region and in an abattoir, in which is maintained an inspection service determined by the Secretary of Agriculture to be adequate to assure that such materials have been removed from animals, found at time of slaughter to be free from anthrax, foot-and-mouth disease and rinderpest.
